Case Study

How Automation Helped Cut Commercial Loan Booking Time in Half

Customer

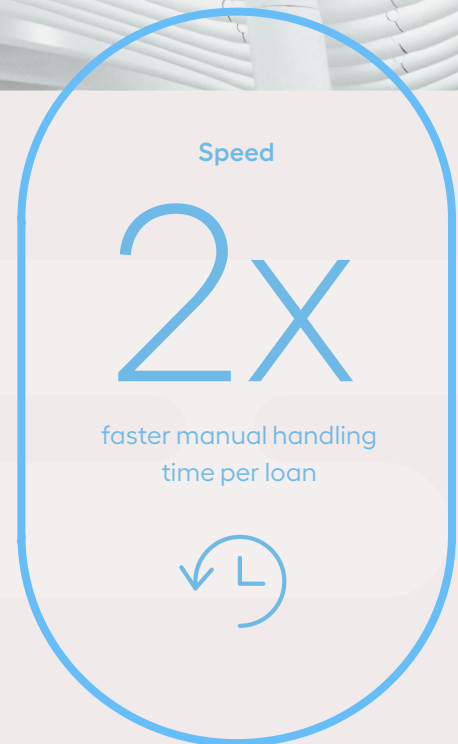

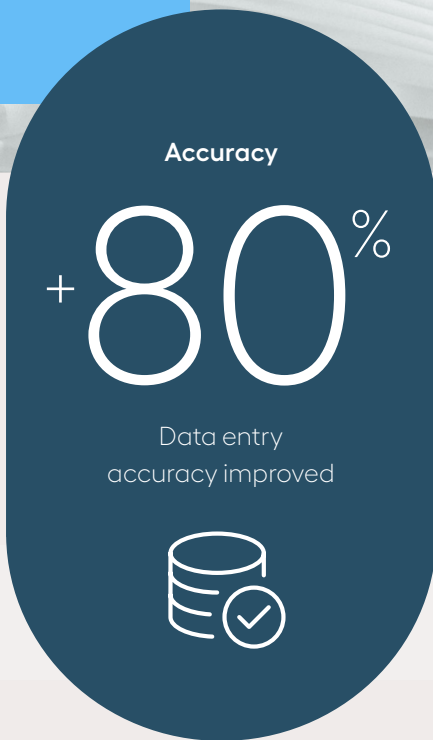

Top 10 U.S. bank

Problem

For years, the bank's commercial loan booking team was unable to comply with SOX regulations. The loan booking process was highly manual, requiring analysts to key 80+ data fields into a system. Despite rigorous coded quality controls, the process was slow and prone to error.

Solution

The bank implemented WorkFusion Smart Process Automation (SPA). SPA trained cognitive bots, powered by machine learning, to automatically extract key data fields from several types of unstructured loan documents. Automating each step also created an ongoing audit trail, which enabled the bank and regulators to trace how bots interpreted and actioned data.

Benefits

By automating the high-volume, repetitive work of data extraction, the bank's valuable analysts were able to shift their focus to validating automated outcomes and to reviewing complex loans that are initially too complex to automate. This transformation increased the accuracy of the process, reduced

the handling time per loan and gave the bank more analyst capacity for customer service.

Timeline

The bank's operations team was able to automate the process in six weeks.

How Automation Helped Cut Commercial Loan Booking Time in Half

Before

Person scanned and imported paper loan forms into loan origination system

L1 analyst booked loan package via manual data entry

For L2 review, a QC Analyst validated all SOX-related fields (50%)

In L3 review, another QC Analyst re-validated all SOX-related fields (15% sampling of loans)

After

OCR

digitizes the loan package by converting PDF to TXT

Cognitive Bot

extracts SOX-related data fields

Workflow

routes exceptions to L1 Maker (human-in-the-loop) for handling, which tunes bot performance

RPA Bot

enters data into commercial lending system

Results

- Increased accuracy of data entry by **80%**
- Reduced manual handling times per loan by **50%**

WorkFusion's AI-driven RPA software creates and manages software robots for knowledge work. Built for data-first companies, its products automate business processes by combining AI, RPA and people in one intuitive platform. Top enterprises choose WorkFusion to reduce their cost of doing business and to use AI to overcome the complexity of scaling operations.
