

The Intelligent Automation Cloud

Automate Further

Automate further, faster, with superior results

Real-time Learning Bots

WorkFusion bots learn and adapt in real time with no need for third-party tools, data scientists or coding — which means better reliability at lower cost.

Low-code AutoML

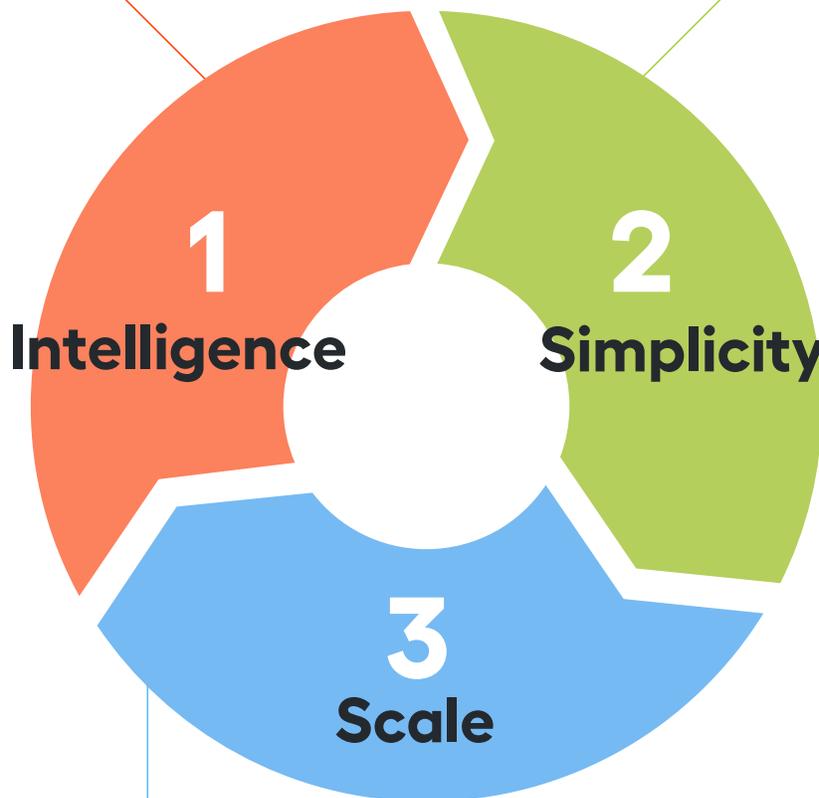

Low-code AutoML logic makes machine learning more accessible and training automation bots easier — without massive burden of labeling data.

Pre-emptive Controls

AI framework for risk control includes differential privacy, to cut risks of rogue bots or data and model exposure. In-process pre-emptive controls optimize bot performance.

Centralized Governance

Existing operation protocols are brought into automated processes, to eliminate siloes of RPA and ensure maximum control, compliance and auditability.

Plug-and-Play Scalability

The platform runs on standard hardware without additional programming — so automation is portable, repeatable and more cost-effective across functions, business units and geographies.

AI-era Security

Because it's deployed as a single platform behind an organization's firewall, the data risks associated with cloud and third-party APIs are eliminated.

Unified Platform

Traditional RPA relies on multiple external tools which must be managed, whereas our single platform helps automate a range of processes and entire roles.

Predictive Analytics

Real-time analytics show how automation has performed, how it will perform, and how to optimize — so users can improve efficiency and cost/capacity planning.

Workforce Insights

Monitor entire processes, teams and operations, helping drive better decisions from a single dashboard.

Unmatched time to value

1-DAY FEASIBILITY ASSESSMENT
6-WEEK PROOF OF CONCEPT
12-WEEK PRODUCTION

WorkFusion's high-speed 1-6-12 go-live program lets companies deploy intelligent automation rapidly: a one-day feasibility assessment, six weeks to proof of concept, and the solution in production within 12 weeks or less. It's major leap in the speed at which Intelligent Automation can be implemented.

“WorkFusion’s tightly integrated AI, RPA and BPM capabilities within its unified platform enable it to build solutions for a broad spectrum of automation constructs.”

—ANIL VIJAYAN
PRACTICE DIRECTOR, EVEREST GROUP

“WorkFusion has taken a unique approach to helping automate well beyond RPA, which provides the simplicity and scalability necessary to make critical business decisions based on real-time data and analytics.”

—PRAVEEN BHADADA,
PARTNER AND PRACTICE HEAD, ZINNOV

About WorkFusion

WorkFusion's AI-driven automation and RPA software offer intelligent automation at scale for companies across the globe. Forward-thinking businesses and leading enterprises across the business spectrum choose WorkFusion to reduce their total costs, up-skill their workforces and gain a competitive edge. WorkFusion is headquartered in New York City with operations throughout Europe and Asia.
